

THOR

BROADCAST

Using OBS and a PTZ Camera to launch an RTSP stream

First the Camera and your PC have to be on the same SUBNET in order for it to see the Video

To check your subnet press the Windows Key and type CMD –press enter – Command Prompt Terminal will open

Type ipconfig ->

```
Windows IP Configuration

Ethernet adapter Ethernet:

    Connection-specific DNS Suffix  . : attlocal.net
    IPv6 Address. . . . . : 2600:1700:c5b0:1640::27
    IPv6 Address. . . . . : 2600:1700:c5b0:1640:3520:1137:bf16:8394
    Temporary IPv6 Address. . . . . : 2600:1700:c5b0:1640:8c55:9c00:cb8a:99dd
    Link-local IPv6 Address . . . . . : fe80::3520:1137:bf16:8394%10
    IPv4 Address. . . . . : 192.168.1.211
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : fe80::768a:dff:fe87:b3e0%10
                                192.168.1.254
```

You can see under IPv4 that the address of my pc is 192.168.1.211

Standard Gateway for the MaximusProX we are showing is 192.168.1.162

They are both on the same subnet of .1.xxx so OBS will be able to use the video from the camera

A second way to check is go to Control Panel -> Network and Internet

[Click View Network Status and Tasks](#)

Control Panel Home

Change adapter settings

Click Change Adapter Settings

Change advanced sharing settings

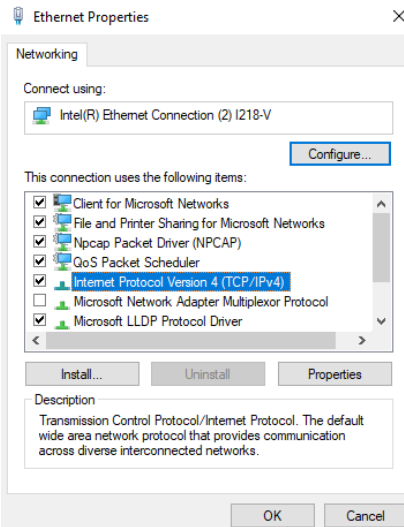

Media streaming options

Right Click Your Ethernet Adapter

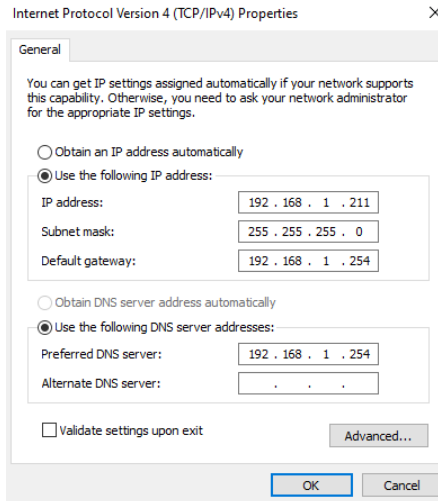

Click Properties

Double click Internet Protocol Version 4 (TCP/IPv4)

Or highlight that box, then click Properties at the bottom

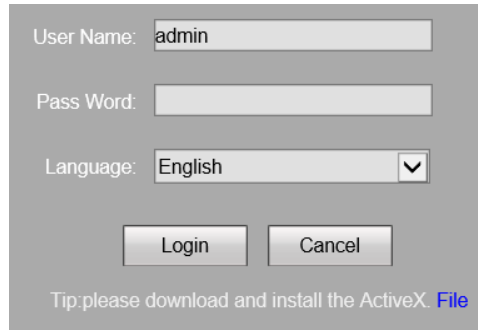

Here we see again its 192.168.1.211

Change the subnet here, or

Click advanced and add a second subnet

Once that is resolved lets go to the camera page of 192.168.1.162

When you get to the login page the bottom message asks you to download the ACTIVE X file

User Name:

Pass Word:

Language: ▼

Tip: please download and install the ActiveX [File](#)

On the bottom right of the screen you should see a POP UP that asks you to ALLOW IT

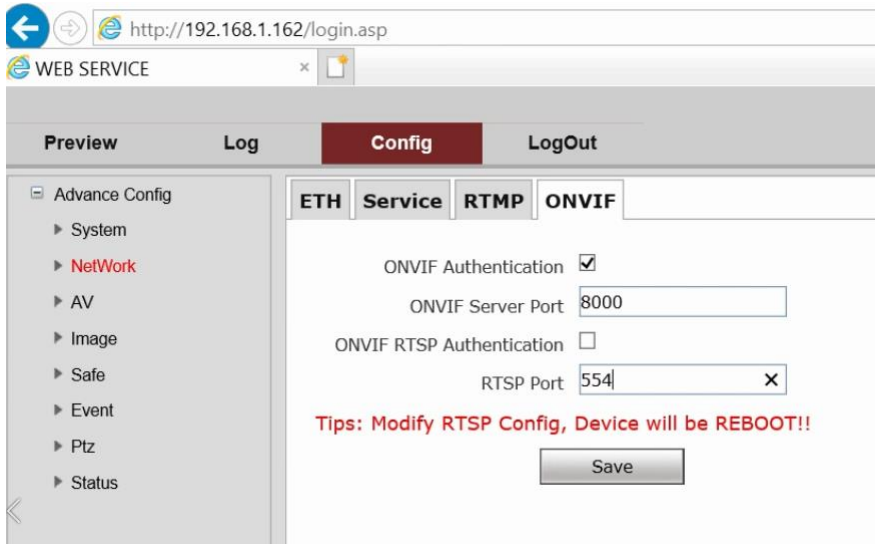

You have to make sure it is ALLOWED

Press RUN

Once that is installed you are ready to go LIVE with your Camera

So once you have your Maximus Camera GUI Open you have to specify which port you will be using for the RTSP stream.

Here we see the IP address of the camera is 192.168.1.162

Go To CONFIG > NETWORK

Under ONVIF we see the Port

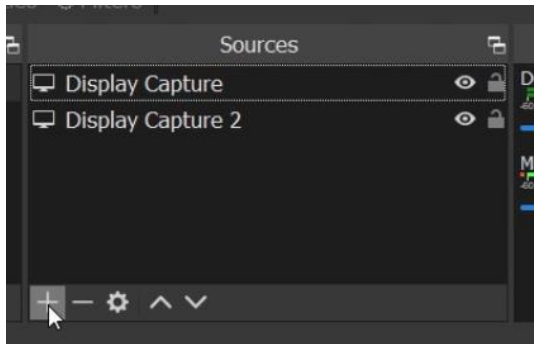

RTSP Port is 554

If you don't have OBS yet; click here to go to the download page <https://obsproject.com/>

Click which is best suitable and download the free program

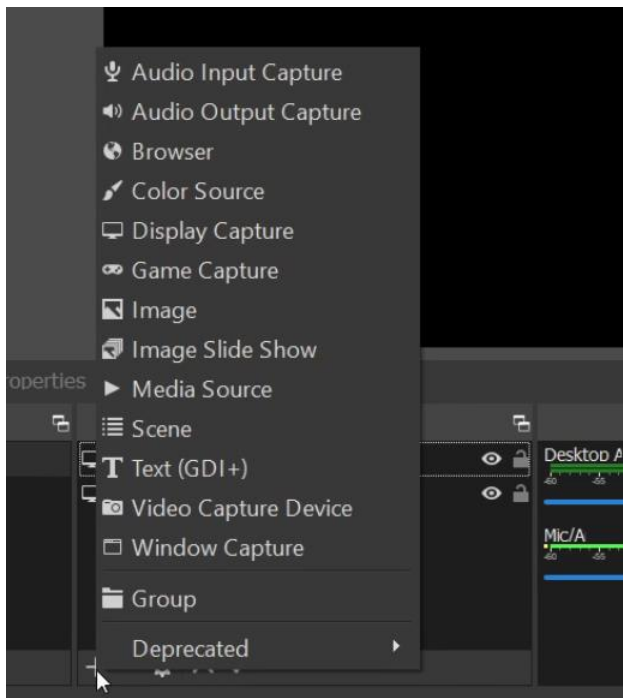

Once you have downloaded the program, you should see a blank screen

On the bottom of the screen you will see this box labeled **SOURCES**

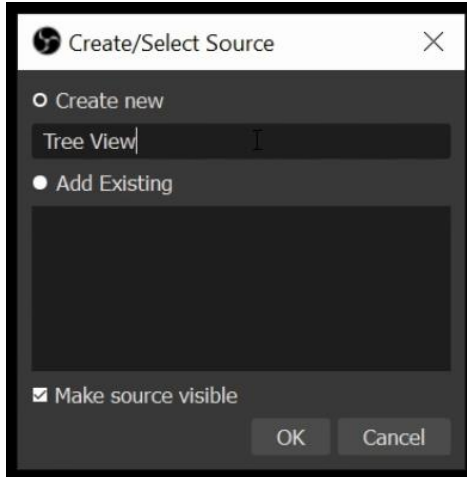

Click the + button and you'll see a pop up window

Once you have this up

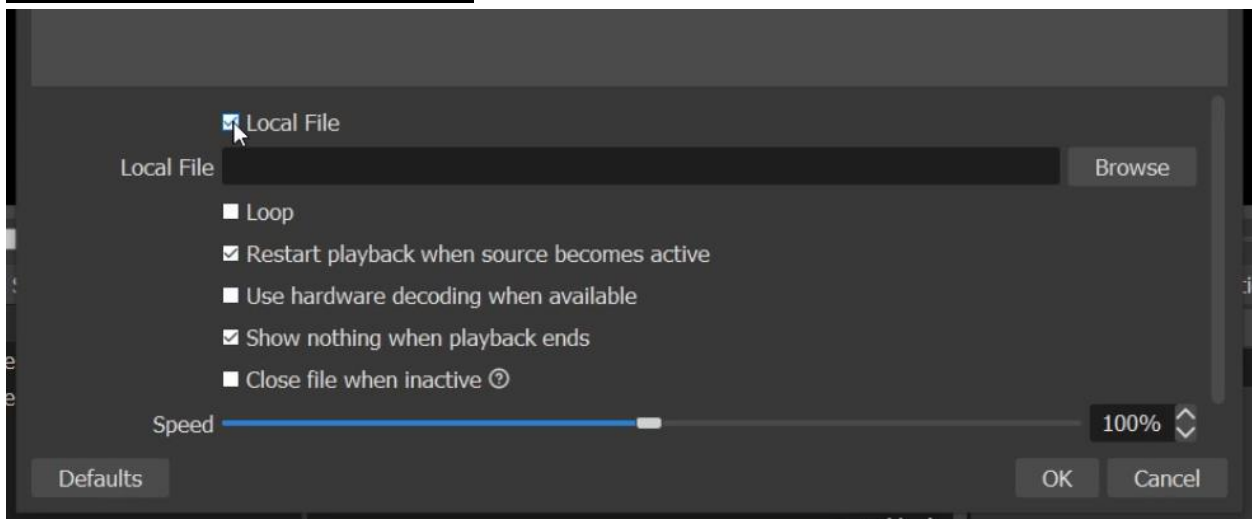

← You will see a **MEDIA SOURCE**

Click on **MEDIA SOURCE**

Another pop box will show like this: you can now CREATE NEW

In this case I left a camera outside and will name it TREE VIEW

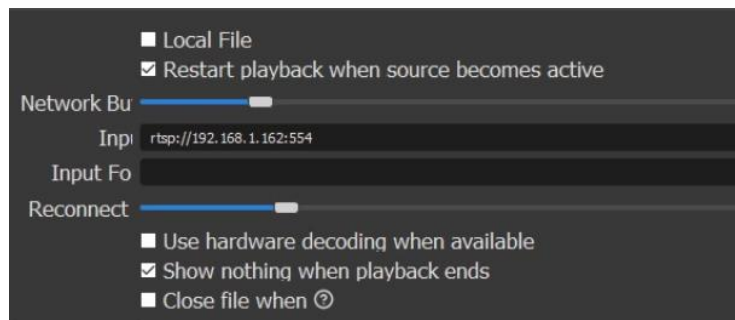

At this point we can now enter the RTSP stream information from the Maximus PTZ camera

FIRST YOU MUST UNCLICK THE LOCAL FILE BUTTON

Next we input the information from the GUI we used to log into the camera

The correct Syntax for RTSP is >>>>>> rtsp://192.168.1.162:554

Then press OK on the bottom right of the box

From here we can start streaming out, start recording, and make other video adjustments if necessary.

Again, OBS is free, very popular, and easy to use! Once you're here and need additional help you can always contact OBS or read about all the other stuff it can do from their website.

Our goal here is to ensure your Thor Camera can connect to the software, you can record your video, or stream it right away.

The manual to the [MaximusProX](#) is on the product webpage; scroll to the bottom, and download the PDF; there is also additional video's on how to do this on the webpage and on YouTube.
