PRO-DVB H-2/4HD-EM(S/H)

2ch or 4ch HD-SDI

AC3 & CC 608/708

Revision 1.3
Revised 2014
A Note From Thor About This Manual

Intended Audience

This user manual has been written to help people who have to use, integrate and to install the product. Some chapters require some prerequisite knowledge in electronics and especially in broadcast technologies and standards.

Disclaimer

No part of this document may be reproduced in any form without the written permission of Thor Broadcast.
The contents of this document are subject to revision without notice due to continued progress in methodology, design and manufacturing. Thor shall have no liability for any error or damage of any kind resulting from the use of this document.

Copy Warning

This document includes some confidential information. Its usage is limited to the owners of the product that it is relevant to. It cannot be copied, modified, or translated in another language without prior written authorization from Thor Broadcast.

Chapter 1 Introduction

1.1 Product Overview

The Thor H-2/4HD-EM is our new pro broadcast featured encoder that features high end performance with powerful functionality. It comes equipped with 2/4 HD-SDI channel inputs that support: MPEG-2 & H.264 video encoding with MPEG-1 layer 2, LC-AAC, HE-AAC, and AC3 audio encoding. The 2/4 SDI inputs will be output via either ASI or IP in MPTS or SPTS. This encoder will be an ideal chassis to support any DVB-ASI programming as it adopts the necessities to output AC3 audio and Closed Caption 608 &708. Also comes’ stock with dual power supply, as a back-up units is on standby to ensure your unit won’t fail. Structured to facilitate to the demanding needs of any broadcast, this encoder series is the newest addition to Thor’s Broadcast Encoders.

1.2 Key Features

- Dual power supply
- MPEG2 HD/SD & MPEG4 AVC/H.264 HD/SD video encoding
- MPEG1 Audio Layer 2, LC-AAC, HE-AAC and AC3 audio encoding
- 4*HD-SDI input
- Support VBR/CBR rate control mode
- Support CC (closed caption) EIA 608 & EIA 708
- Low Latency function
- Supports PSI/SI editing and inserting
- Supports IP null packet filter
- ASI output, IP (MPTS & 4 SPTS) output over UDP, RTP
- LCD display, Remote control and firmware
- Web-based NMS management; Updates via web
## 1.3 Specifications

### Encoding Section

#### Video

<table>

1. LCD window
2. Power supply indicators
3. Power Alarm Switch: When only one power supply is connected or one of the power supplies fails, the device will give alarm sound, and then press the alarm switch to turn off the alarm sound.
4. NMS port for the connection between the device and PC
5. DATA port for IP signal out
6. Indicators for whole unit power supply, working alarm and input signal lock status
7. Control Buttons
8. Handles
Chapter 2 Installation Guide

Please use caution when operating this device in order to abstain from any possible injury during installation. For this reason, please read all details listed below and make and use caution before proceeding to operate and use this electronic equipment.

2.1 General Precautions

✓ Must be operated and maintained in an area free of dust and debris.

✓ The cover should be securely fastened, do not open the cover of the chassis when the power is on. This will also void Thor’s manufacturer’s warranty.

✓ After installation, securely stow away all loose cables, external antenna, and others.
2.2 Power Precautions

- Be careful when connecting a power source to the device.
- Do not operate in wet or damp areas. Make sure the extension cable is in good condition.
- Make sure the power switch is off before you start to install the device.

2.3 Device’s Installation Flow Chart Illustrated as following

![Installation Flow Chart]

2.4 Environment Requirement

<table>
<thead>
<tr>
<th>Item</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machine Hall Space</td>
<td>When user installs machine on rack, the distance between 2 rows of machine frames should be 1.2~1.5m and the distance against wall should be no less than 0.8m.</td>
</tr>
<tr>
<td>Machine Hall Floor</td>
<td>Electric Isolation, Dust Free&lt;br&gt;Volume resistivity of ground anti-static material: 1X10^7~1X10^{10}\Omega, Grounding current limiting resistance: 1M\Omega&lt;br&gt;(Floor bearing should be greater than 450Kg/m'^2)</td>
</tr>
<tr>
<td>Environment Temperature</td>
<td>5<del>40°C(sustainable ), 0</del>45°C(short time), installing air-conditioning is recommended</td>
</tr>
<tr>
<td>Relative Humidity</td>
<td>20%~80% sustainable 10%~90% short time</td>
</tr>
<tr>
<td>Pressure</td>

### 2.5 Grounding Requirement

✔️ It is important to keep this device grounded to ensure all of the modules function correctly. Correctly grounding the device will also help prevent any electrical interference, lightening. Etc. Also it helps reject minor interference that may disrupt the devices ability to function smoothly. General rule of them, make sure the device is grounded when installing anywhere.

✔️ Always use copper wire. When applied correctly the ground must be wrapped well to ensure maximum conduction so it can reduce any high frequencies. The copper ground wire should also be as short and thick as possible.

✔️ Installer must make sure that the two ends of the ground are well conducted and have appropriate anti-rust properties.

✔️ It is prohibited to use any other device as part of the grounding electric circuit.

✔️ The area of the conduction between the ground wire and device’s frame should be no less than 25 m².
Chapter 3 Operation

3.1 LCD Tree Breakdown

- Initializing
- General Working Status
  - 1 Status
    - 1.1 Alarm
    - 1.2 Uptime
  - 2 Input Sets
    - 2.1 Input 1

    - 2.2.2 Program 2
      -(Same content with 2.1.1)
  - 3 TS Config
    - 3.1 TSID
    - 3.2 ONID
    - 3.3 Output Bitrate
    - 3.4 NIT Insert
    - 3.5 ASI Output
  - 4 Network
    - 4.1 NMS
      - 4.1.1 NMS IP
      - 4.1.2 Subnet mask
      - 4.1.3 Gateway
      - 4.1.4 MAC Address
      - 4.1.5 Web NMS Port
      - 4.1.6 Reset Password
    - 4.2 IP Stream
      - 4.2.1 MPTS Output
      -(Same content with 4.2.1)
      - 4.2.2 SPTS A
        -(Same content with 4.2.1)
      - 4.2.3 SPTS B
        -(Same content with 4.2.1)
      - 4.2.4 SPTS C
        -(Same content with 4.2.1)
      - 4.2.5 SPTS D
        -(Same content with 4.2.1)
  - 5 System
    - 5.1 Save Config
    - 5.2 Load Saved
    - 5.3 Factory Reset
    - 5.4 LCD time-out
    - 5.5 Version
3.2 Initial Status

Switch on the device and after a few seconds’ initialization, it presents start-up pictures as shown below:

- **H-HD-EM**: Module name and number
- **P1**: Program 1; **P2**: Program 2; **P3**: Program 3; **P4**: Program 4
- **X.XX Mbps**: indicate the current encoding bit rate of the corresponding channel.

3.3 General Settings for Main Menu

Press “Lock” key on the front panel to enter the main menu. The LCD will display the following pages where user can configure the parameters for the device:

User can press UP/DOWN buttons to specify menu item, and then press ENTER to enter the submenus as below:

1) **Status**
Alarm

The alarm indicator will turn on if there is no A/V signals inputting or outputting bit rate overflows. User then can enter this menu to check the error type.

Uptime

It displays the working time duration of the device. It times upon power on.

2) Input Settings

Under this submenu, the LCD will show “2.1 Input 1” and “2.2 Input 2” to represent the two SDI-input modules respectively.

Each SDI input module support two program input connecters. Under submenus 2.1 (or 2.2), user could set the video/audio parameters for the 2 SDI programs respectively.
Video in Status

Users can enter this menu to check the video input status.

Video Format

The SDI encoding module supports both “MPEG2” and “H.264” video encoding formats. Users can enter this menu to select one format from the 2 options.

► MPEG2
H.264

Press ENTER to shift ‘*’ to ‘►’, and then press UP/DOWN buttons to specify one item and then press ENTER to confirm. Press MENU to step back to upper level menu. (The operation method is applicable for rest part.)

Low Delay

This unit can achieve a low time delay from encoding to decoding terminal end-to-end.

► Normal
Mode 1

----------------------------------------------- NOTE -----------------------------------------------

The different combination of Video Format, Video Bit-rate, Low Delay Mode, the Resolution of signal source and Decoding solution adopted on terminal side will have an impact on the latency.

------------------------------------- VIDEO BIT RATE -------------------------------------

Video Bit Rate

Users can set the video encoding bit rate manually in this menu.

0.5~19.5Mbps for H.264 encoding

1~19.5Mbps for MPEG-2 encoding

CC Switch

CC refers to Closed Caption.

Users can select a standard for the CC from the 2 options in this menu.

► EIA 608
EIA 708
Audio Format

The SDI encoding module supports 4 encoding formats. Users can enter this menu to select one format’s from the 4 options available.

- MPEG1 Layer 2
- MPEG2 AAC
- MPEG4 AAC
- AC3

Audio Bit Rate

The audio bit rate ranges from 64Kbps to 320Kbps. Users can select one bit-rate from the options provided.

Audio Gain

Users can adjust the audio gain in this menu.

Program Info

Users can enable or disable the program output in the first sub-menu and configure the other parameters in the rest sub-menus.

- Program Output
  - Enable
- PMT PID
  - 0x101
- Program Name
  - TV-101
- PCR PID
  - 0x100
- Service Name
  - TV-Provider
- Video PID
  - 0x100
- Program number
- Audio PID
3) TS Configuration

This encoder supports TS output via ASI ports. ‘TS Config’ is for the configuration of ASI output. Its submenus contain:

- **3.1 TS ID**
- **3.2 ON ID**

- **3.3 Output Bit rate**
- **3.4 NIT Insert**

- **3.5 ASI Output**

**TS ID/ ON ID**

Users can set the TS ID and Original Network ID in the 2 submenus. The IDs are in hexadecimal form.

**ON ID**

0x0001

**Output Bit rate**

Users can set the max output bit rate for the ASI MPTS out. (Range 0-100 Mbps)

**Output Bit rate**

60.000 Mbps

**NIT Insert**

Users can insert your NIT with operations in the menu.

**NIT Insert**

- **Yes**
- **No**

**ASI Output**

Users can copy a stream from the IP out streams (1 MPTS & 8 SPTS) to output through ASI.

**ASI Output**

- **MPTS**
4) Net Work

‘Net work’ is divided into 2 parts: NMS and IP Stream.

NMS

Submenus under ‘NMS’ are for setting the parameters related to the device connection in the network.

- **NMS IP**: 192.168.000.136
- **Subnet Mask**: 255.255.255.000
- **MAC Address**: 201012345678
- **Gateway**: 192.168.000.001
- **Web NMS Port**: 00080
- **Reset Password?**: Yes or NO

The IP address for connecting the device to PC
**IP Stream**

Submenus under ‘IP Stream’ are for setting the output IP stream in MPTS or SPTS.

- **IP Stream**
  - 4.2.1 MPTS Output
  - 4.2.2 SPTS Output A
  - 4.2.3 SPTS Output B
  - 4.2.4 SPTS Output C
  - 4.2.5 SPTS Output D

- **Data Enable Null PKT Filter**

- **Output IP Output Port**

- **Service IP Subnet Mask**

- **Gateway Protocol**

**5) System**

Users can set the system parameters in this menu. Enter ‘System’ submenus to separately set corresponding parameters.

- **System**
  - 5.1 Save Config
  - 5.2 Load Saved CFG
  - 5.3 Factory Reset
  - 5.4 LCD Time-out
  - 5.5 Version

Choose yes to save settings and press ENTER to confirm.

Choose yes to restore the device into factory's default configuration.

Choose yes to restore the device into the last saved configuration.

Press DOWN/UP key to select a time out for the LCD lighting duration (5-120 seconds).
Chapter 4 WEB NMS Operation

Using the LCD digital display and front buttons for setting configuration is always an option if you are close by, conveniently you can alter the same settings through a computer by connecting the device to the web NMS Port. Always make sure that the computer’s IP address is different from the Units IP address; otherwise, it will cause an IP conflict. Below is an explanation of how you can adjust settings through a web portal.

4.1 login

The default IP address of this device is 192.168.0.136. (We can modify the IP through the front panel.)

Connect the PC (Personal Computer) and the device with an ethernet cable, and use ping command to confirm they are on the same network segment.

NOTE* if the PC IP address is 192.168.99.252, we then change the device IP to 192.168.99.xxx (xxx can be 1 to 254 except 252 to avoid IP conflict).

Use web browser to connect the device with a PC by inputting the encoders IP address in the browser’s address bar and press Enter.

It will display the Login interface as Figure-1. Input the Username and Password (Both the default Username and Password are “admin”.) and then click “LOGIN” to start the device setting.
4.2 Operation

When we confirm the login, it displays the WELCOME interface as shown in Figure-2.

![Web Management Interface]

User can click any item here to enter the corresponding interface to check information or set the parameters.

It automatically identifies and displays the signal source interface and real-time encoding bit rate of corresponding input channel.

TS indicators—Green light indicates the TS is normal, which otherwise turns to red.

Figure-2

Input 1

From the menu on left side of the webpage, click “Input 1”, it displays the information of the programs (1\textsuperscript{st} & 2\textsuperscript{nd} ones) from the 1\textsuperscript{st} SDI encoding module as Figure-3.
The different combination of Video Format, Video Bit-rate, Low Delay Mode, the Resolution of signal source and Decoding solution adopted on terminal side will have an impact on the latency.
Input 2

Similarly, from the menu on left side of the webpage, clicking “Input 2”, it displays
the information of the programs (3rd & 4th ones) from the 2nd SDI encoding module.

IP Output

Click “IP Output”, it will display the interface where to configure the output IP stream
in MPTS or SPTS the as Figure-4.

To configure the output IP address and ports for the IP Channels respectively.

After setting the parameters, click “Apply” to save the settings.
General

Clicking “General” from the menu, it will display the interface as shown in Figure-5 where to set the network info for the output TS.

![Figure-5](image-url)

To set the max output bit rate for the ASI MPTS out

Users can copy a stream from the IP out streams (1 MPTS & 8 SPTS) to output through ASI.

Save/Restore

From the menu on left side of the webpage, click “Save/Restore”. it will display the screen as Figure-6 where to save or restore your configurations.

![Figure-6](image-url)
Restart the Device

Click “Reboot” from the menu, the screen will display as shown in Figure-7. Here, when clicking “Reboot” box, it will restart the device automatically.

![Figure-7](image)

Update the Device

Click “Firmware” from the menu it will display the screen as Figure-8. Here user can update the device by using the update file. Click “Browse” to find the path of the device update file for this device then click “Update” to update the device.

After updating the device, user needs to restart the device by using Reboot options.

![Figure-8](image)
Network

When user clicks “Network”, it will display the screen as shown in Figure-9. It displays the network information of the device. Here you can change the device network configuration as needed.

![Figure-9]

Change Password

When you click “Password”, it will display the password screen as shown in Figure-10. Here you can change the Username and Password for logging into the device.

![Figure-10]
Keyboard and LCD Lock: If it is marked with “\n”, the LCD and keyboard will be locked to avoid unrelated users’ modifying or viewing the device information and configurations. You can’t operate the keyboard & LCD, only the device IP address can be noted in the LCD window.

Backup/Load

Click “Backup/Load” from the menu, it will display the screen as in Figure-11.

**Backup Configuration** – To back up the device configuration file to a folder

**Load Configuration** – If user needs to load the old configuration to the device, click “Browse” and find the backup configuration file path. After selecting the file, click “Load File” to load the backup file to the device.
Chapter 5 Troubleshooting

THOR’s ISO9001 quality assurance system has been approved by the CQC organization. We guarantee the products’ quality, reliability and stability. All THOR products haven passed all testing and manual inspections before they are shipped out. The testing and inspection scheme already covers all the Optical, Electronic and Mechanical criteria which have been published by THOR. To prevent a potential hazard, please strictly follow the operation conditions.

Prevention Measures

- Installing the device in a place where the environmental temperature is between 0 to 45 °C
- Making sure the unit has plenty of ventilation for the heat-sink on the rear panel; and other heat-sink bores if necessary
- Checking the AC input within the power supply and ensure it is working, the connection is correctly installed before switching on device
- Checking the RF output levels to stay within a tolerable range, if it is necessary
- Checking all signal cables have been properly connected
- Frequently switching on/off device is prohibited; the interval between every switching on/off must be greater than 10 seconds.

Conditions needed to unplug power cord

- Power cord or socket damage.
- Any liquid that got into the device.
- Any stuff that could cause a circuit short
- Device in damp environment
- Device has suffered from physical damage; i.e. it fell off a rack.
- Longtime idle.
- After switching on and restoring to factory setting, device still won’t work properly.
- Maintenance needed on device
Chapter 6 Packing List
